

TASA

# OMEGA

## *BUSINESS UNIT*

World's leading supplier of pure  
"Peruvian Anchovy Fish Oil",  
featuring 100% vertical integration  
from sustainable sea harvest to  
customer product application.

# ONE OF THE MOST SUSTAINABLE FISHERIES IN THE WORLD

## PERUVIAN ANCHOVY FISHERY

THE PREFERRED AND MOST TRUSTED SOURCE FOR HIGH QUALITY OMEGA-3 FISH OIL

### Peruvian Government – Sustainability in Fishery Management

Since 2008, the Peruvian government has adopted a strategic environmental focus in establishing the Fishing Quota Law, by which no more than 25% of the identified total Anchovy Biomass could be fished per season. This ensures the sustainable management of the maritime resources, with a productive and viable population level for future generations of anchovy.

## THE WORLD'S LARGEST PRODUCER OF OMEGA-3 RICH CRUDE FISH OILS

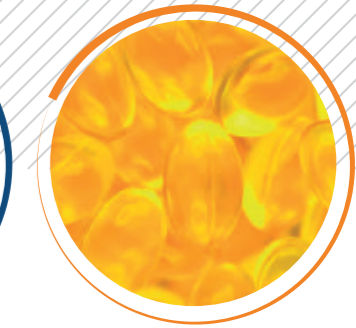

The world's largest fish meal & oil producer, processing 25% of the Peruvian anchovy fishing quota (8% of the global annual production).

OMEGA BUSINESS UNIT

Sustainably assured supply of the very best omega-3 rich crude fish oil sources (complete chain of custody & control, from sea harvest to customer application).

**TASA is the first 100% vertically integrated refined & concentrated omega-3 fish oil manufacturer in Perú.**

- > 33/22TG

## OMEGA BUSINESS UNIT MANUFACTURING PLANT AND R&D FACILITIES DEVELOPMENT

In 2015, TASA's Omega Business Unit started production of high quality, fully refined TG oils, and concentrated omega-3 EE & TG fish oils.

### Manufacturing plant:

- > State of the art technology for a fully automated production process.
- > Ensuring top quality GMP according to US (FDA), Europe (SANCO) and China (CFDA) regulations, and product safety standards.

### TASA R&D facility focuses on:

- > Continual product quality and manufacturing process enhancement.
- > Innovative creation of new products.

## TAKING CARE OF THE ENVIRONMENT AND THE COMMUNITY

TASA's Omega Business Unit operates with the utmost respect for the environment and sustainable business practices, in order to build a socially responsible enterprise.

### A Green plant:

- > Effluents are processed through our wastewater treatment facility.
- > Biogas generated to reduce energy requirements.
- > Treated water is recycled to irrigate the surrounding green areas.
- > Using our waste streams as biodiesel to reduce our dependence on fossil fuels.

### Social Responsibility:

- > We are working with the community on several social development projects with focus on Nutrition, Education, Environment and Business development.
- > Business development opportunities are being created with the surrounding communities, with the objective to generate both direct and indirect sources of employment.
